Sergio Sebastian Atanacio Flores

Junior AI & Automation Engineer | LLM agents, tool calling, evals

Based in Lima, Peru · Remote | cvaz656@gmail.com | linkedin.com/in/ssaaf

PROFESSIONAL SUMMARY

Junior AI and automation engineer and Systems Engineering student (UPC, 9th term). Builds LLM agents with tool calling, token streaming, evals, memory and model fallback in TypeScript and Python, and automates data workflows with n8n and APIs. At BaldeCash was the main developer of LLM and data systems that run in production with real users, built end to end with coding agents (Claude Code). Every change gets an eval, a control number or a reproducibility check.

SKILLS

AI / LLM: LLM tool calling, Evals (golden-set harness), n8n, Cloudflare Workers AI, Token streaming (NDJSON), System-prompt design, Model fallback, Agent memory, Coding agents (Claude Code: subagents, skills), OpenAI-compatible APIs, Grok API, TensorFlow, PyTorch and Keras (coursework)

Programming & Backend: Python, TypeScript, Node.js, Express, Next.js, React, REST APIs, SQL, MySQL, PostgreSQL, Redis

Engineering & Cloud: Git, GitHub Actions, CI/CD, Vercel, Vitest (unit testing), Caching and snapshots, AWS Certified Cloud Practitioner

Data & BI: ETL, Power BI, DAX, Excel, Airtable, Data validation, Reproducible pipelines, Web scraping

EXPERIENCE

AI & Data Systems Engineer, BaldeCash (fintech) Jan 2026 – Present

- **LLM agent with tool calling.** Built a provider-agnostic (OpenAI-compatible) chat agent in a Next.js/TypeScript app with NDJSON token streaming, ~21 tools over MySQL, PostgreSQL and Airtable, a capped multi-turn tool loop, persistent per-user memory, response cache, daily usage counter and secondary-model fallback; added a parser that recovers tool calls emitted as plain text.
- **Eval harness.** Wrote a golden-set evaluator that replays real chat-log questions against the agent endpoint and scores answer-first, no tool-name leakage, no step narration and formatting, so every prompt change is measured; wrote the system prompt from a reasoning-quality spec.
- **Coding-agent workflows.** Orchestrated 6 parallel subagents (Claude Code) to extract structured fields from a document corpus, with a human-review queue for low-confidence cases; maintain project skills, a persistent memory index of 60+ verified findings and a headless-Chrome driver for visual QA.
- **Full-stack monitor.** Built a Node/Express + React monitor that merges Airtable and two courier platforms (REST API and SSO session) into one live view refreshed every 10 min by cron (Vercel/Railway, Redis); a rules engine classifies shipment states with business-day SLAs and sends desktop, in-app and email alerts; integrated an LLM check for ID documents; read-only on source systems.

Data & Automation Developer (Freelance) May 2025 – Present

- **Automation systems.** Built report-automation and document-management systems for clients (up to 35% efficiency gain).
- **LLM and scraping.** Web scraping and data structuring; integrated LLM-based insight generation using n8n, OpenAI and Grok APIs.

Retail Analyst Intern – Data & Operations, Vivo Smartphone Sep 2025 – Dec 2025

- **Validation automation.** Automated processing and validation with Python scripts, cutting the data-cleaning cycle from 90 to 15 minutes and preventing ~5k inconsistent records per week.
- **Anomaly detection.** Applied AI for validation and anomaly detection: +15% control accuracy and 30% faster incident resolution.

Data Analyst Intern, AnnexBox, New York, USA Aug 2024 – Jun 2025

- **Machine learning.** Trained a TensorFlow handwriting-recognition model at 92% accuracy.

PROJECTS

- **LLM Agent with Tool Calling and Eval Harness (synthetic data)** – github.com/cvazzz/llm-agent-evals. Public GitHub project: agent with tool calling, token streaming and a golden-set eval harness, running on synthetic data.
- **Reproducible Data-Quality Pipeline (synthetic data)** – github.com/cvazzz/reproducible-data-pipeline. Public GitHub project: rule-based data validations with a snapshot mode and control numbers, reproducible end to end on synthetic data.

EDUCATION

B.Sc. Systems Engineering (9th term), expected graduation July 2027, UPC Aug 2024 – Present

Software Development (graduate), ISIL Apr 2021 – Aug 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner | IBM: Tools for Data Science | IBM: What is Data Science? | ISIL: Information Systems Deployment & Quality

LANGUAGES

Spanish (native), English (upper-intermediate, self-assessed)
